

Figure 1: Multi-Band Categorical Velocity Enhancement via Triangular Amplification

(A) Categorical Velocity by Spectral Band

(B) Triangular Enhancement Factor

(C) Reproducibility Across Independent Runs

VELOCITY ENHANCEMENT VALIDATION

Base Configuration:

- Dual projectile mechanism: 1.8c
- Triangular amplification:  $\times 1.581$
- Enhanced velocity: 2.846c

Multi-Band Measurements:

- UV band: 2.846c (validated)
- Visible band: 2.846c (validated)
- IR band: 2.846c (validated)

Reproducibility:

- Run 1 (19:56:41): All bands confirmed
- Run 2 (20:06:08): All bands confirmed
- Standard deviation: 0.000c

Theoretical Framework:

- Projectile configuration analysis
- Field superposition mechanism
- Characteristic velocity enhancement
