

# Recursive Observation Frequency Multiplication

Frequency Multiplication:

$$\omega_{max}^{(n)} = \omega_0 \times Q^n, Q \sim 10^6$$

$n \sim 5$ :  $\omega \sim 10^{43} \text{ rad/s}$  (Planck) |  $n \sim 10$ :  $\omega \sim 10^{73} \text{ rad/s}$  (trans-Planckian)

Temporal Resolution:

$$\tau_{min} = 2\pi/\omega_{max}^{(n)}$$

$\tau_{min} \sim 10^{-19} \text{ to } 10^{-38} \text{ s}$  (beyond Planck time)
